

# Resurfacing

## BEACH DRIVE RESURFACING

### SOLUTION

*The purpose of this project is to reconstruct W Beach Dr with new pavement, curbs, and sidewalks. The sidewalk on the west side of the street may be a 12 foot wide multiuse path. The road elevation will be lowered slightly where warranted to allow more freeboard between the new curb and the affected businesses finished floor elevations.*

*The project will improve drainage for the street and reduce the potential for flooding as well as improving pedestrian access along this corridor.*

### PROBLEM

Poor drainage results in frequent flooding of the roadway, and at times the flooding of some of the businesses near the 5th St intersection and the street is in need of resurfacing due to age.
