

Intersection Improvement

STAR AVE. & US 231 INTERSECTION

SOLUTION

This project will include the construction of a second left-turn lane at the intersection of Star Avenue and U.S. 231 for vehicles turning off of Star Avenue. This project will enhance daily traffic by doubling the amount of turn lane space and the amount of vehicles that can move through the intersection at once.

PROBLEM

This intersection is heavily trafficked, and because of the close proximity to the intersection of Star Avenue and John Pitts Road there is limited turn lane space for vehicles turning onto U.S. 231.

Additionally, since vehicles are forced to stop before proceeding into the intersection, the free flow of vehicles through the intersection is impeded.
